

**ABSTRACT OF THE DISCLOSURE**

The present invention pertains to a computing system having an input system with  
5 local storage interfaced with a computing device, wherein input information is transferred  
from the digitizer input system to the interfaced computing device based on an adaptive  
transfer policy that extends the battery life of the interfaced computing device. The  
interfaced computing device may be a PC. The digitizer input system can support  
automated, selective transfer policies based on the power management configuration of  
10 the PC interfaced with the digitizer input system and user-selected transfer policies.
